1. Synopsis

Set file date from exif-date for files in \$ORIG_DIR.

2. Prerequisites

None.

3. Configuration

ORIG_DIR

Directory for original images. Defaults to \$TARGET_DIR/orig.

4. Description

Linux computers typically use a hardware clock set to UTC, while the clock of digital cameras is set to local time. After copying the files to hard-disk, file-date and exif-date (*DatetimeOriginal*) usually differ. This module sets the file-date to the same value as the date in the exif-data.
