1. Synopsis

Convert original files in jpg-format to tif.

2. Prerequisites

None.

3. Configuration

ORIG_DIR

Directory for original images. Defaults to `$TARGET_DIR/orig`.

IMG_DIR

Working directory. Defaults to `$TARGET_DIR/work..` This module creates it's output files in this directory.

PREVIEW_MODE

If set to 1, resize images to `$PREVIEW_SIZE`.

PREVIEW_SIZE

If `PREVIEW_MODE=1` the converted images is at most `${PREVIEW_SIZE}x${PREVIEW_SIZE}` large.

JPG2TIF_OPTS

Additional options for convert. E.g. if you want to rotate your files, you could set `JPG2TIF_OPTS=-rotate 90`. To automatically rotate images using the information in the exif-tag "*orientation*", use `JPG2TIF_OPTS=-auto-orient`.

4. Description

Convert original images in jpg-format to tif. The quality is set to 98, maybe this will be configurable in the future.
