3 Configuration.....	2
4 Description.....	2

1. Synopsis

Move images (originals and generated files) to the archive-directory below ARCHIVE_ROOT_DIR.

2. Prerequisites

None.

3. Configuration

ORIG_DIR

Directory for original images. Defaults to \$TARGET_DIR/orig.

IMG_DIR

Working directory. Defaults to \$TARGET_DIR/work.. This module searches generated files in this directory.

ARCHIVE_ROOT_DIR

Root directory of all archive-directories. Defaults to \$TARGET_DIR/archive..

IMG_PREFIX

Prefix of the original images (e.g. dsc_, img_).

4. Description

This module creates subdirectories below the archive root-directory. These subdirectories use the name-format *yyyymmdd* and all images taken on the date *mm/dd/yyyy* will be moved to the same subdirectory \$ARCHIVE_ROOT_Dir/*yyyymmdd*. Note that generated files go to the same archive-directory as their respective original files.

The archiving-scheme implemented by this module is just one of many possible ways to archive your images. Other schemes might be added in the future.
