1. Synopsis

Convert filenames of images in \$ORIG_DIR to lowercase.

2. Prerequisites

None.

3. Configuration

ORIG_DIR

Directory for original images. Defaults to \$TARGET_DIR/orig.

4. Description

This module changes the case of all images in \$ORIG_DIR to lowercase. Since memory cards usually are formatted with FAT, filenames on the memory card are upper-cased. Lowercase filenames save some typing. Also, a number of unix-tools do not work well with uppercase names.
