2 Prerequisites.....	2
3 Configuration.....	2
4 Description.....	2

1. Synopsis

Set file-date of all created images to the file date of the original image.

2. Prerequisites

None.

3. Configuration

ORIG_DIR

Directory for original images. Defaults to `$TARGET_DIR/orig`.

IMG_DIR

Working directory. Defaults to `$TARGET_DIR/work`. This module only changes the file-date of files in this directory.

IMG_PREFIX

Prefix of the original images (e.g. `dsc_`, `img_`).

4. Description

This module just changes the file-date of generated files to the file-date of the original file. If you also run the module [fixDate](#), this is also the date the image was taken.

Note that the module [mv2archive](#) will always move generated files to the same archive-directory as the original file regardless of the file-date of the generated file.
