1. Future Plans

New features are driven by my own needs and by popular user demands. Please check the file TODO in the distribution for details. Currently planned features include:

- support redo/resume (don't run all modules for all images automatically, check if target file of a module already exists).
- improve logging
- add new modules (see list in TODO)
- save and lookup tca-parameter in a sqlite-database (this would prevent the costly recalculation of these parameters)
- redesign config files
